Summary of Qualifications

- Working at Hitachi Rail GTS as a Network Design Specialist, focusing on designing train network systems and automation.
- Graduated from McMaster student with a degree in Computer Science with a minor in Mathematics with summa cum laude.
- Completed various different software developer and networks positions and developed applications using various IDEs and industry used languages such as Java, C++, and JavaScript along with network design.
- Worked with various LLMs and models.

Education

Bachelors of Computer Science with a Minor in Mathematics | McMaster University

📅 09 2021 – 04 2026 📍 Hamilton, Ontario, Canada

Job Experience

Network Design Specialist | Hitachi Rail

📅 05 2025 – PRESENT 📍 North York, Ontario, Canada

- Responsible for designing different CBTC network solutions for various projects such as Muni Metro/TCUP, Montréal Blue Line, Crosstown New York, and Hyderabad.
- Aided in redesigning model projects Vanilla 7 and DCS 3.2.
- Drawing different TCP/IP layer diagrams (Layer 1, 2 and 3).
- Working alongside different designers to set up and test different networks such as writing scripts to create configurations for devices.

Frontend Developer Intern | OLG

📅 09 2024 – 12 2024 📍 North York, Ontario, Canada

- Focused on refactoring site from Vue 2 to Vue 3's Composable API.
- Developing the OLG.ca website with A11y, increasing site accessibility by 70%.
- Working alongside different labs (teams) such as payment and accounts lab on different parts of the site (health, playbreaks, etc.).

Software Developer Intern | CIBC

📅 01 2024 – 04 2024 📍 Toronto, Ontario, Canada

- Part of the RMVV (Risk Management Vetting and Validation), DA (Deal Analyzer), and CDD (Climate Data Dashboard) teams.
- Focused on development of the different applications by utilizing user stories.
- Created the documentation for the CDD Macros and for the DA Admin Application, which increased the usability of the macros by and hastened development by 80%.
- Leads the daily meetings as scrum master, thus fostering team support and facilitating agile development.

Software Developer Intern | Practice Perfect EMR

📅 05 2022 – 09 2022 📍 Concord, Ontario, Canada

- Designed an API tester that checks server health along with producing PDFs from APIs.
- Generated JSON files from server calls.
- Created a GUI for the application in Java for a better user experience.
- Decreased overall test duration and bug fix times by 50%.

Projects

Elite Lu Website | 🔄 | 🌐

📅 09 2023 – ONGOING

- Demonstrated coding and artistic abilities through the creation of a captivating website that effectively showcased technical skills and creative talent, resulting in increased visibility and recognition within the industry.
- Utilized Next.js and TypeScript to develop a responsive and visually appealing website that effectively showcases my portfolio and skills.
- Displays projects, experience, contact information, and an additional music section to get to know me.
- Scores around 90%-95% in terms of efficiency based on PageSpeed Insights.

Last.fm Stats Organizer | 🔄 | 🌐

📅 10 2025 – ONGOING

- A wrapper for Last.fm data which organizes data by grouping and ungrouping artist data and album data.
- Solves two main issues with Last.fm, which includes artists with the same name and artists with various names (e.g. i-dle is also known as (G)I-DLE formerly, but they are not grouped together or LiSA (Japanese singer) and Lisa (Blackpink member)).
- Displays the user data in a simple, clear way that shows their information.

GitHub Stats |

 05 2024 – ONGOING

- A backend application that tracks the user's most commonly used languages in their repos by utilizing Express.js.
- Displays graphically the user's most used languages with an SVG image that can be added onto their README.md files on GitHub.
- Focusing on adding a weighted graph for projects and colour themes.

The Simple Derivatives Game |

 01 2022 – 05 2022

- Developed a math game that teaches students in grades 11 and 12 the basics of derivatives in the form of a game.
- Featured two main game modes: "freeplay" and "normal play", offering distinct game experiences for players, with the latter incorporating a three-lives system.
- Incorporated procedural generation for interactive user gameplay to engage students, facilitating their easy acquisition of derivative knowledge.
